

Mihir Trivedi

Data Engineer

249-360-5901 | mihir1611t@gmail.com | [Linkedin Profile](#) | [Data Engineering Portfolio](#)

Sudbury, Ontario, Canada | Canadian Permanent Resident | Open to Remote, Hybrid, or Relocation

PROFESSIONAL SUMMARY

Results-driven Data Engineer with 8+ years of professional experience designing, troubleshooting, and deploying robust ETL/ELT pipelines, enterprise data warehouses, and end-to-end data analytics infrastructure. Demonstrated expertise in technical requirements gathering, data profiling, and data quality assurance across healthcare, banking, public sector, and e-commerce domains. Adept at translating complex data needs into scalable relational (RDBMS) and data lake solutions under structured Agile and DevOps methodologies. Strong cross-functional communicator committed to balancing technical accuracy with corporate strategic objectives to drive measurable organizational results.

TECHNICAL SKILLS

Data Engineering & ETL/ELT: Python, SQL, T-SQL, dbt, SSIS, Talend, Data Quality Engineering, Data Profiling, Pipeline Automation, Data Analytics, Root-Cause Analysis, User Acceptance Testing (UAT)

Databases & RDBMS: PostgreSQL, SQL Server (SSRS, SSAS), MySQL, Oracle, DB2, NoSQL, MongoDB, Structured & Semi-structured Data (JSON, XML, CSV), Data Requirements Modeling, Star Schema

Cloud, Big Data & DevOps: Azure (AZ-900), GCP (Google Cloud SQL), Apache Spark, Apache Hive, Hadoop, Git, GitHub, GitLab, CI/CD Pipelines, Docker, Linux/Unix Shell Scripting

Languages & Tools: Java, Python, SQL, JavaScript, TypeScript, R, ServiceNow, JIRA, Confluence

BI & Analytics: Power BI (PL-300), Tableau, DAX, Power Query, Executive Reporting, KPI Dashboards

Core Competencies: Software Development Life Cycle (SDLC), Agile Frameworks, Scrum, Troubleshooting, Technical Documentation, Inter-departmental Collaboration, Decision Making, Analytical Problem Solving

PROFESSIONAL EXPERIENCE

Flosonics Medical

Toronto, ON (Remote)

Data Engineer / Business Intelligence Developer

Oct 2024 to Apr 2026

- Gathered granular data requirements from corporate stakeholders to architect the company's first production data warehouse using PostgreSQL and dbt, enforcing strict data governance and medallion-style pipeline layering.
- Engineered automated ETL/ELT pipelines to ingest, clean, and integrate high-volume semi-structured JSON medical logs with enterprise relational databases, Salesforce, HubSpot, and corporate data platforms.
- Executed automated data profiling, proactive troubleshooting, and comprehensive QA validation routines to eliminate operational latency and secure 100% data accuracy for downstream decision making.
- Spearheaded end-to-end User Acceptance Testing (UAT) documentation and cross-departmental collaboration with Finance, Quality Assurance, and Executive teams to translate functional specifications into reliable data analytics assets.
- Automated enterprise Tableau reporting architectures and developed predictive inventory models, successfully driving a 40% reduction in manual reporting overhead.

City of Greater Sudbury

Sudbury, ON

Data Engineer / Business Intelligence Analyst

May 2024 to Aug 2024

- Owned the end-to-end reliability of high-priority SQL Server production pipelines and complex T-SQL stored procedures handling sensitive municipal 911 dispatch records and Opioid Response Ministry reporting datasets.
- Integrated the external PreHos emergency response platform via secure data flows leveraging SSIS, Python, and Google Cloud SQL Auth Proxy endpoints, managing secure database connections across hybrid clouds.
- Enforced rigorous data quality verification, continuous pipeline monitoring, and system troubleshooting where data processing integrity directly impacted public safety metrics and compliance audits.
- Authored extensive technical documentation, database schemas, and data dictionary guidelines; delivered training to municipal staff on established data governance standards.

LoopX

Software Development Consultant (Data Platform)

Sudbury, ON

Jun 2024 to Jul 2025

- Independently designed, tested, and deployed a low-latency mining data platform optimizing real-time data analytics delivery from automated underground machinery sensors.
- Built resilient streaming ingest architectures and automated analytical processing pipelines using Python, optimizing execution performance and storage layout for complex real-time telemetry.
- Collaborated with hardware engineering teams to conduct rigorous troubleshooting and root-cause analysis of data collection bottlenecks under volatile environmental conditions.

Minax Inc.

Lead Software Developer

Sudbury, ON

Oct 2023 to May 2024

- Automated highly complex safety reporting workflows via Microsoft Power Automate for Vale, reducing a manual 5-hour data extraction, formatting, and analysis operation down to minutes.
- Designed and implemented a React Native offline-first mobile data collection tool featuring automated validation routines to guarantee database record integrity and synchronization across intermittent connections.
- Led cross-functional UAT exercises and production deployments directly on-site, troubleshooting real-world workflows alongside technical staff to ensure rigorous operational accountability.

Mineral Exploration Research Centre

Research Associate (Data & ML)

Sudbury, ON

Mar 2022 to Jul 2023

- Developed robust Python data manipulation, cleaning, and model-training pipelines for massive geospatial data deposits across the Superior province, achieving a 99.5% F1 performance score via Random Forest classifiers.
- Performed advanced feature engineering, data wrangling, and source data quality audits across highly varied multi-format, spatial, and relational databases utilizing automated Python scripts, ArcGIS, and QGIS platforms.

Tata Consultancy Services (TCS)

Lead Software Engineer

Mumbai, India

Nov 2017 to Oct 2021

- Led an Agile team of 4 engineers inside a high-throughput DevOps environment, overseeing system requirements, solution design, database optimization, and system monitoring for the Edgepark e-commerce data tier.
- Architected backend business logic, secure user management protocols, and multi-threaded data processes using Java Spring MVC, Hibernate, and RESTful microservices connected to massive enterprise RDBMS instances (Oracle, MySQL, DB2).
- Successfully launched 13 distinct international B2B commerce platforms on SAP Hybris / SAP Commerce Cloud, accurately managing multi-currency configurations and complex localized data synchronization models.
- Owned production troubleshooting, incident triage, and continuous CI/CD pipeline optimization using JIRA, significantly lowering application release cycles while increasing overall service availability metrics.

EDUCATION

Laurentian University

Master of Computational Science (Data Science & ML focus)

Sudbury, ON

2021 to 2023

- Thesis: Machine Learning for Geological Discovery. Presented findings at AICMSE 2023, Harvard Faculty Club, Boston.
- Co-author: *A study of faults in the Superior province using the random forest machine learning algorithm*. Published in *Ore Geology Reviews*, 157 (Jun 2023), 105403.

Gujarat Technological University

Bachelor of Computer Engineering

India

2013 to 2017
